

SupaTrak Mobile

Vehicle
tracking on
the move

The successful SupaTrak vehicle tracking solution from CMS SupaTrak is now available on a PDA. The development of SupaTrak Mobile takes SupaTrak's standard tracking capabilities to the next level, enabling customers to track their vehicles and assets whilst on the move and from the palm of their hand.

This innovative and flexible solution is ideal for mobile workers, allowing them to access vital information through their SupaTrak vehicle tracking account whilst in the field.

The advancement responds to the ever increasing demand for information on the move and it complements the existing benefits of the standard Su-

paTrak vehicle tracking solution.

In addition to the ability to track assets using the PDA, it is also possible to track the PDA itself. This can be used to facilitate your duty of care obligations towards your employees; being able to locate them in the event of an emergency or other critical situation. Lone worker applications can also be added to the PDA, such as panic switches, which enables you to adhere to your health and safety obligations and demonstrate a duty of care.

Companies large and small have seen immediate cost savings by implementing SupaTrak including Royal Mail, Birmingham City Council, Network Rail, Hampshire Council and Enterprise plc.
